Professional Summary

Full-stack, Platform engineer building API infrastructure and developer tooling at scale. Sole owner of API Management Plane at JPMorgan Chase. Reduced developer friction by 70% through AI-assisted tooling. CKAD certified. Strong foundation in distributed systems, Kubernetes, and backend services (Java, Python, Node.js).

Education

Thapar Institute of Engineering and Technology, Patiala, Punjab, IN *(July 2019 – June 2023)*

B.E in Electronics and Computer Science ***(CGPA : 9.44)***

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Machine Learning

Experience

JP Morgan Chase & Co. *(July 2023 – Present)*

Software Engineer (SDE-II) *Bangalore, IND*

API Management Plane – Platform Ownership:

- Tech lead for API Management Plane, architecting single entry point for 5000+ developers across JPMC's API ecosystem.
- Authored RFCs defining platform architecture and entitlement model; drove alignment across 3 teams and 6+ services.
- Drove migration from Apigee (multi-server Cassandra) to Kong on Kubernetes - consolidated to single-server architecture, reducing infrastructure costs to 50 % and codebase complexity.

Cross-Team Entitlements & Access Control:

- Led cross-team delivery of a unified Entitlement Service defining roles and permissions across API Platform.
- Created reusable Auth Manager, adopted by 6+ services, eliminated redundancy, accelerated secure feature delivery by 40%.

API Quality & API Designer:

- Built OpenAPI validation platform (Node.js, Spectral) processing 4,000+ API specs; deployed as firm-wide compliance gate
- Developed API Spec Designer, linting and LLM-powered auto-fix; 3× faster spec editing, 70% faster violation resolution.
- Owned end-to-end rollout from UAT to production; drove adoption across 300+ API teams as mandatory quality checkpoint.

API Agent:

- Engineered AI agent (LangChain, LangGraph) for automated OpenAPI spec generation and correction 3 times faster API delivery, achieved firm-wide OpenAPI compliance.

Observability Pipeline with Vector & Splunk

- Architected K8s-native log pipeline (Vector sidecars → Kafka → Splunk), bypassing legacy FluentD. Reduced latency 40%, resource usage 40%.
- Handles 60 GB/day of logs with schema normalization, enrichment, and built-in failover for resiliency.

JP Morgan Chase & Co. *(Jan 2023 – June 2023)*

Software Intern (SEP Intern) *Bangalore, IND*

API Store - Subscription & Consumer Platform:

- Designed API Subscription workflow (Spring Boot, Kafka, Cassandra) → 40% faster consumer onboarding, 90% reduction in manual processing.

Projects

LogLens - AI Log Analyzer | Python, LangGraph, ChromaDB, FastAPI

- Built universal log analysis tool supporting K8s, application, cloud, and database logs with auto-format detection
- Implemented cross-service correlation engine linking traces across distributed systems
- Created AI reasoning agent achieving 85% accuracy on root cause identification in benchmark scenarios

Skills

Programming Languages	Java (JDK), JavaScript (ES6+), Python, Typescript, SQL
Systems	Kubernetes, Kafka, Cassandra, Elasticsearch, Redis, PostgreSQL
Full Stack Development	React.js, Next.js, Spring Boot, Node.js, Flask, REST APIs, Microservices, Distributed Systems
Cloud/DevOps	AWS (Lambda, EC2, S3), Docker, Terraform, CI/CD (GitHub Actions)

Certifications & Awards

- CKAD – Certified Kubernetes Application Developer
- Amazon Web Services Cloud Practitioner
- Rising Star Award - JPMorgan Chase (H2 2024)
- SEP Recognition Scroll – Leadership Award, JPMorgan Chase (Q2 2024)
